

CommX Connect

Digital Collaboration
for Operational Success

Operational

Secure

Versatile

Efficient

Get the convenience of an advanced instant messaging and the power of PTT integrated within your network.

It's secure, simple to configure and easy to use.

The new standard for unified communication tools.

Multi-Platform

Seamless compatibility across various platforms. Android, Windows, and Linux devices.

Standard Signaling

We adhere to industry standards. Supporting SIP and WebRTC protocols.

Open Architecture

Enables seamless integration with third-party apps, allowing extreme flexibility.

Cost-Efficient

Cross-Platform compatible, without the need for expensive hardware.

CommX Connect

Secured End-to-End Operational Collaboration

CommX Connect ensures secured operation with a complete array of collaboration features to fit operational needs.

Engineered for the operational requirements of remote and distributed teams, CommX Connect excels in high-security settings.

Efficient & Modern Team Collaboration

The map-based situational awareness capabilities of our product include command and control, click-to-call from the map, group calls based on polygon selection, and many more features.

Embedded C2 Situation Awareness Capabilities

CommX Connect provides map-based situation awareness capabilities, including command & control, click from map, group calls based on polygon selection and many more.

Flexible Deployment Options

The ability to be deployed on-premises, on the public cloud, or in hybrid and distributed environments makes our capability adaptable to any infrastructure requirements, providing scalability, survivability, and disaster recovery readiness.

Combat Proven & Operation Secured

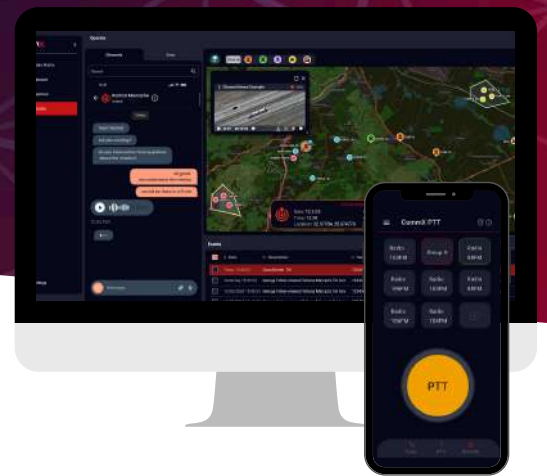

Globally tested and battle proven, CommX Connect is an optimal communication tool field operational security forces

Empowered with AI-based Capabilities

By integrating with CommX Discover, our product offers advanced recording and investigation across all collaboration channels, including noise reduction, voice recognition, speech-to-text, call summarization, and audio/face recognition search

Interoperability with 3rd Party and Existing Systems

CommX Connect's integration & interoperability capabilities allow it to work seamlessly with 3rd party communication systems (e.g. Cisco CUCM), existing systems and radios, making it an excellent fit for clients looking to streamline their workflow.

CommX Connect

Encrypted Communication

You can confidently use the app to share critical information, engage in confidential discussions, and collaborate without concerns about data breaches or unauthorized access.

Extensive Standards Support

CommX Connect offers versatile support for multiple standard and proprietary communication protocols and codecs, including SIP, WebRTC, RTP, G711, OPUS, H264 and more. Customizable compression parameters enable tailoring the communication experience to any requirements.

Easy to Deploy and Use

Designed for simplicity in deployment, configuration, and use, our product ensures a smooth onboarding process for your team without the need for extensive training.

Multi-Platform Support

Our product is compatible with both Android smartphones and Windows-based desktop computers, ensuring accessibility across various operational environments.
